

Standard Seat

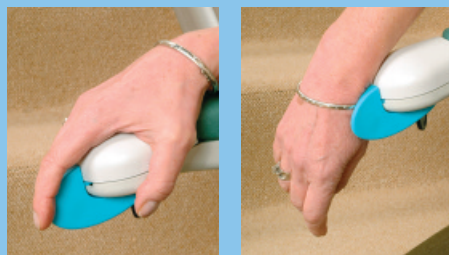

SpaceSaver™ NFS Seat

Perch Seat

Available in three variations to suit individual needs, all Minivator's seats are supplied with wipe clean, flame retardant upholstery in a choice of five colours. You can even replace upholstery later should you wish to change your colour scheme.

Unique Toggle Switch

Minivator's unique paddle switch makes Minivator stairlifts simple and safe to operate and can be fitted on either arm. Just hold the paddle in the direction of travel. Even those with limited mobility or with painful conditions such as arthritis find Minivator stairlifts easy to operate.

SpaceSaver™ Seat

Designed with input from occupational therapists, Minivator's operating toggle is located away from the surface of the armrest, giving you an ergonomically styled surface to hold when getting in or out of the seat.

The arms can also be lifted independently of each other to provide support on one side whilst

The perch seat (above), available on both the 1000 and 2000 stairlifts provides the ideal option for users with limited hip and knee flexibility.

leaving the other free for side transfer if required.

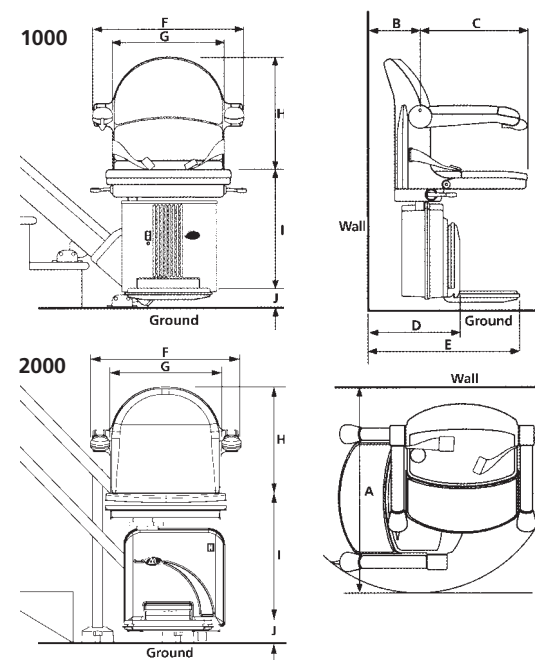

Compact and unobtrusive, the seat, arms and footrest can all be folded to maximise the free space in hallways, on the landing or on the stairs.

# Minivator Stairlifts

# Discover the many benefits of a Minivator stairlift

Designed with users in mind, the Minivator 1000 straight and 2000 curved stairlifts offer a safe, reliable, smooth way of overcoming the problems that some people encounter when faced with using their stairs. Both the Minivator 1000 and 2000 are compliant with BS5776 and ISO9386-2.

Minivator, a quality registered company, prides itself on supplying superior service and quality solutions. Minivator has already helped thousands of people across the world gain access to areas in their homes and premises.

With additional powered features to choose from, your lift can be tailored to meet your needs regardless of whether your staircase is straight, or goes around corners.

Minivator stairlifts don't just offer an easy way of climbing stairs. On call 24 hours a day, 365 days a year, Minivator also offer you peace of mind and a long term solution.

1000 Series Straight Stairlift

## Packed with features that make life easier

### CHOICE OF SWIVEL

With a choice of powered or manual swivel turning the Minivator stairlift at the top of the stairs couldn't be easier.

#### Manual swivel

Minivator's manual swivel system is operated from specially designed levers located on both sides of the stairlift.

The manual swivel can be operated by pulling the lever up or pushing it down. This is especially useful if more than one person will be using the stairlift.

#### Powered swivel

Simply retain pressure on the toggle switch at the end of your journey and the powered swivel will automatically turn you round to face the landing.

All powered swivel seats can be manually swivelled clear of the stairway to allow access in the event of an emergency.

### HAND HELD REMOTE CONTROL

You can send your stairlift to the top or bottom of the stairs, or call it back with the remote control handset.

Supplied as standard your remote controls can be wall mounted or handheld.

### POWERED FOOTREST

Finished with a durable anti-slip carpet the footrest folds away easily. Should you wish, you may choose a powered footrest link that will automatically fold your footrest up or down when the seat is folded, removing the need to bend. This feature can be supplied to be operated from either the seat or a switch located under the arm.

The standard footrest is designed to finish level with the landing making it easier to transfer feet from one surface to another.

Minivator stairlifts also come with a battery back up as standard meaning that you need not worry about being stranded in the event of a power cut.

## Safety as standard

Rapid response safety sensors stop the stairlift if it meets with an obstruction during travel. Once the obstruction is removed the stairlift can continue on its journey.

The Minivator 2000 track can be extended, space permitting. This means that the track would finish away from the stairs. This is particularly popular on landings allowing you to dismount directly onto the landing.

## Stairlifts to suit a wide range of staircases

2000 Series Curved Stairlift

### STRAIGHT AND CURVED TRACKS

Whether your staircase is straight, or goes around corners, Minivator can supply a system to meet your needs. The Minivator 2000 can even accommodate spiral staircases.

As with Minivator's seats aesthetics are considered carefully. The 1000's hidden rack system provides a compact slim line solution that nestles into the edge of the stairway.

Available in two colours as standard the 2000 track can in fact be supplied in any RAL colour as a special order.

Every Minivator 2000 track is bespoke: your track is optimised to give you the best travel possible whilst fitting snugly to your wall or banister regardless of how it is configured.

Minivator's passion for producing the best solutions resulted in the tightest internal curve available from any stairlift manufacturer. In many cases the Minivator internal curve allows a stairlift to be fitted in locations that no other manufacturer can accommodate.

Curved Stairlift Track

### STRAIGHT AND CURVED HINGE TRACKS

1000 Series Straight Stairlift

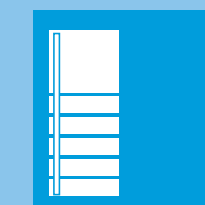

You need not worry that doorways will be obscured or that tracks will cause excessive trip hazards. Minivator hinge tracks are available on both the 1000 and 2000. Operated from the handset, the track can be folded to eliminate trip hazards or leave doorways unobstructed. The 1000 can also be supplied with a manual hinge. Fully automatic hinge tracks are available on both the 1000 and 2000 Series, these will raise and lower without the user having to operate them.

Both tracks are designed to fit closely to the edge of the stair. This minimal intrusion leaves the stairway clear for other users.

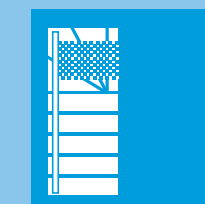

2000 Series Curved Stairlift

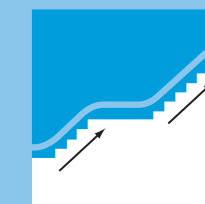

### Examples of track configurations

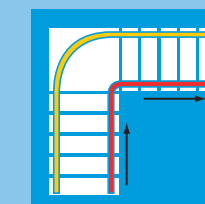

1000 Series.

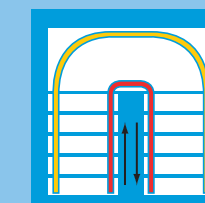

1000 Series with platform.

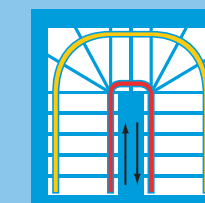

2000 Series. Intermediate landing, top overrun, bottom overrun.

2000 Series. Quarter landing (90 degree flat curve).

2000 Series. Hall landing (180 degree flat curve).

2000 Series. Helix bends (90 or 180 degree).

Supplied with a clip seatbelt as standard you can also choose from Velcro and retractable seatbelts, once again allowing you to customise your stairlift to provide a solution that meets your needs and preferences.

Discreetly hidden from view under the armrest the lockable key switch allows you to prevent unauthorised use of your stairlift.

With four height settings your stairlift can be adjusted to suit your needs.
